PRESSURE DROP, HORIZONTAL FLOW, STANDARD SPRING (WATER AT 20°)

To determine the pressure drop of other mediums the equivalent water flow volume has to be calculated: $\dot{V}_w = \sqrt{\frac{\rho}{1000}} \times \dot{V}$

$\dot{V}_w$ = Equivalent water flow volume in m³/h; ρ = Density in kg/m³; $\dot{V}$ = Flow volume in m³/h
